

SAI HAN MYO SHANE

(Junaid Wong)

RESEARCH & TECHNICAL CV

LLM Research | AI Evaluation | Cybersecurity | STEM

Yangon, Myanmar | junaidnacoda@gmail.com | sai-han-myo-shane-portfolio.vercel.app

RESEARCH INTERESTS

- LLM reasoning, evaluation and benchmarking
- Uncertainty, calibration and robustness
- AI safety and trustworthy AI
- Failure analysis and evaluation methodology
- Cybersecurity and adversarial thinking
- Student-facing AI and human judgment

TECHNICAL SKILLS

- Python, NumPy, Pandas and Google Colab - working research workflow
- Competitive programming and algorithmic problem-solving
- Prompt/scenario design for model evaluation
- Rubric-based response scoring and structured comparison
- CSV dataset construction and basic quantitative analysis
- Debugging, testing and reproducible documentation habits

LANGUAGES

- English: Cambridge B2 First for Schools, Grade A, CEFR C1, 188/190
- French: DELF A1
- Chinese: basic / learning
- Myanmar: conversational

Portfolio: sai-han-myo-shane-portfolio.vercel.app

ICSC Ambassador: icscompetition.org/sshane

PROFILE

High-school student from Myanmar developing research depth in LLM reasoning, evaluation, uncertainty, robustness, AI safety, and cybersecurity. Represented Myanmar at the International Olympiad in Artificial Intelligence (IOAI) 2026 and the International Cybersecurity Olympiad (ICO) 2025. Combines competitive programming, AI evaluation design, and STEM olympiad experience with a strong interest in empirical research on how language models reason, fail, and can be evaluated more reliably.

EDUCATION

NIEC International School - Yangon, Myanmar | Grade 9 / Year 10, AY 2026/27

- Recipient of a two-year 50% academic scholarship for AY 2026/27 and AY 2027/28.

ProQual Professional Qualification - Yangon, Myanmar | Pearson Edexcel International GCSE private candidate

- Pearson Edexcel International GCSE: Computer Science Grade 9; ICT Grade 8 (May/June 2026); remaining subjects continue in 2027.

Pearson Edexcel iLowerSecondary Achievement Program | 2025

- Level S4 in Mathematics (75/80), Computing (71/80), and Science (67/80); Level S3 in English.

Singapore International Primary School Examination (iPSLE) | July 2025, SEAB

- AL1 in English Language and Science; Certificate of Commendation and Outstanding Subject Performance Certificates.

AI, COMPUTING & CYBERSECURITY HIGHLIGHTS

- **IOAI 2026:** Represented Myanmar at the global finals in Astana, Kazakhstan.
- **ICO 2025:** Represented Team Myanmar at the International Cybersecurity Olympiad at the National University of Singapore.
- **ICSC:** Official International Computer Science Competition Ambassador (2026); 2025 Final National Award, Myanmar #2 (top 15%).
- **CodeCombat International Coding Olympiad:** Global 1st Place Champion in programmatic script logic.
- **IJCO / NJCO cybersecurity track:** IJCO 2025 Team Silver; IJCO 2024 Individual Bronze and Team Silver; NJCO 2025 Silver (Myanmar #1) and NJCO 2024 Bronze.
- **IMO 2027 Myanmar Team Selection:** Passed the Pre-TST stage and qualified/registered for Myanmar's IMO 2027 team-selection pathway. Selection is based on TST1, TST2, the Myanmar National Olympiad (MNO), European Mathematical Cup (EMC), and Asian Pacific Mathematics Olympiad (APMO).

SELECTED STEM RECOGNITION

British Physics Olympiad Junior Physics Challenge 2025 - Global Gold, global rank 36;
Singapore Mathematics Global Finals 2026 - Global Silver; SASMO 2026 - Silver; Kangaroo Mathematics 2025/2026 - Silver; STEMCo Global Silver medals in Biology and Chemistry; SIMOC 2025 - Bronze.

LEADERSHIP & GLOBAL EXPOSURE

- **Global Student Leadership Council / IJHS:** Council Member, Student Development Committee, 2025-present; peer training, tutoring, and youth outreach.
- **Zero2Entrepreneur International Bootcamp - Asia School of Business, Kuala Lumpur:** Full Scholarship Recipient and First Prize Winner, 2025.
- **Young Achievers Leadership Academy - Shenzhen, China:** Platinum Scholarship Recipient and Outstanding Leader Award, 2025.

RESEARCH & TECHNICAL PORTFOLIO

Algoverse-focused update | preliminary research work clearly distinguished from completed results

WISE-STUDENTLLM-BENCH

Evaluating LLM Safety for Student Learning

Status: preliminary research concept and pilot design. It is not presented as a completed benchmark or a generalizable empirical study.

RESEARCH QUESTION

How can student-facing LLM responses be evaluated for factual reliability, overreliance, academic integrity, privacy, unsafe advice, and support for independent reasoning?

PROPOSED METHOD

- Build a safe set of 20-30 student-facing prompts spanning misinformation/hallucination, overreliance, academic integrity, privacy, unsafe advice, and responsible learning support.
- Record real model outputs with model name, date, prompt ID, reviewer scores, and notes; label any demonstration rows explicitly.
- Use a 1-5 rubric covering factual reliability, learning support, academic integrity, privacy protection, and safety of advice.
- Analyze category means, disagreement patterns, and Green/Yellow/Red action labels in Python.
- Document limitations, safe prompt boundaries, and data handling; avoid private student data and harmful operational instructions.

PLANNED ARTIFACTS

prompts.csv | scored_responses.csv | rubric.md | analysis.ipynb / analysis.py | README.md | data_card.md | results_summary.md

Scope: evaluation of existing LLM responses only; no model training or LLM construction.

CURRENT RESEARCH DIRECTIONS

Interests emphasized in the 2026 Algoverse application:

- LLM reasoning: distinguishing correct final answers from flawed or brittle reasoning processes.
- Uncertainty and calibration: studying when models are overconfident, underconfident, or poorly calibrated.
- Robustness: testing consistency under paraphrases, formatting changes, and related prompt perturbations.
- Evaluation methodology: designing benchmarks and rubrics that separate accuracy, reasoning quality, uncertainty, and safety.
- Student-facing AI safety: applying evaluation methods to learning, verification, privacy, and responsible AI use.

RESEARCH READINESS

- **AI olympiad experience:** exposure to data handling, model-oriented problem solving, and structured technical tasks.
- **Cybersecurity competitions:** adversarial thinking, risk identification, and attention to system failure modes.
- **Competitive programming:** algorithmic reasoning, debugging, persistence, and precise implementation.
- **STEM olympiads:** formal reasoning, quantitative analysis, and comfort with unfamiliar technical problems.
- **Evaluation discipline:** clear separation of real observations from demo/TODO content, with explicit limitations and reproducibility notes.

RESEARCH GOAL

Develop from competition-level technical problem solving toward supervised AI research: formulating a narrow question, constructing or curating evaluation data, running reproducible experiments, analyzing failure patterns, and communicating results with appropriate uncertainty and limitations.

SELECTED INTERNATIONAL EXPERIENCE

- IOAI 2026 - Team Myanmar, Astana, Kazakhstan.
- ICO 2025 - Team Myanmar, National University of Singapore.
- Zero2Entrepreneur 2025 - full scholarship and First Prize, Asia School of Business, Kuala Lumpur.
- Young Achievers Leadership Academy 2025 - Platinum Scholarship and Outstanding Leader Award, Shenzhen.

AVAILABILITY OF SUPPORTING MATERIAL

Competition certificates, academic results, MSM team-selection qualification notice, ambassador profile, and project materials can be provided where requested.
