

SAI HAN MYO SHANE

(Junaid)

PROFESSIONAL RESUME & TECHNICAL PORTFOLIO

AI Safety | LLM Evaluation | Cybersecurity | STEM

Yangon, Myanmar | Portfolio: <https://saihanmyoshane.com> | GitHub: <https://github.com/SaiHanMyoShane> | Email: Available upon request

RESEARCH INTERESTS

- AI safety risk evaluation
- LLM evaluation / benchmarking
- Trustworthy and responsible AI
- Student-facing AI risks
- Cybersecurity and secure AI use
- AI literacy + human judgment

TECHNICAL SKILLS

- Competitive programming
- Algorithmic problem-solving
- Programmatic scripting logic
- Prompt/scenario design
- Rubric-based response scoring
- CSV dataset + basic analysis
- Python/Colab workflow

LANGUAGES

- English: Cambridge B2 First, Grade A, CEFR C1, 188/190
- French: DELF A1 foundation
- Chinese: basic/learning
- Myanmar: conversational

PROFILE

High-school student from Myanmar with a developing technical focus in AI safety, LLM evaluation, responsible AI literacy, and cybersecurity. Selected to represent Myanmar in the International Olympiad in Artificial Intelligence (IOAI) 2026 and the International Cybersecurity Olympiad (ICO) 2025. Current technical portfolio focuses on evaluating LLM safety for student learning, including hallucination/misinformation, overreliance, academic integrity, privacy, unsafe advice, and human judgment.

NATIONAL TEAM SELECTIONS & CORE ACHIEVEMENTS

- IOAI 2026: selected as Myanmar National Team Member for the global AI finals; currently preparing for IOAI 2026.
- ICO 2025: represented Team Myanmar at the International Cybersecurity Olympiad, National University of Singapore.
- ICSC 2025: Final Round Participant; 2nd National Award, Myanmar; achieved the highest score among Myanmar participants in the Final Round; Special Honours in the Qualification Round with a score of 23.7/25.
- CodeCombat International Coding Olympiad: Global 1st Place Champion in programmatic script logic.
- British Physics Olympiad Junior Physics Challenge: Global Gold Award.
- IJCO/NJCO cybersecurity track: IJCO 2025 Individual Silver; IJCO 2024 Individual Bronze and Team Silver; NJCO 2025 Silver; NJCO 2024 Bronze.
- IMO 2027 pipeline: MOMC Junior II Round 2 National #14; direct entry to Pre-Team Selection Test pool.

EDUCATION

NEEC International School - Yangon, Myanmar | Cambridge Upper Secondary / Cambridge ICE Pathway; Secondary 3-4 / Grade 9-10 / Year 10-11. Recipient of Two-Year Academic Half Scholarship Award for AY 2026/2027 and AY 2027/2028.

ProQual Professional Qualification - Yangon, Myanmar | Pearson Edexcel International GCSE private candidate. Completed Pearson Edexcel International GCSE ICT and Computer Science in May/June 2026; planned board targets include Mathematics A (Higher), Further Pure Mathematics, Physics, Chemistry, Biology, English Language B, and English Literature.

Pearson Edexcel iLowerSecondary Achievement Program | AY 2025: Level S4 in Mathematics (75/80), Computing (71/80), and Science (67/80); Level S3 in English.

Singapore International Primary School Examination (iPSLE) | July 2025, SEAB: Certificate of Commendation and Outstanding Subject Performance Certificates; achieved AL1 in English Language and Science.

ADDITIONAL STEM AWARDS

Singapore Mathematics Global Finals 2026 Global Silver; Kangaroo Math 2025/2026 Silver; STEMCo Global Silver Medals in Biology and Chemistry; SIMOC 2025 Bronze and Honorable Mention; IJMO 2025 Honorable Mention; FISO IQ 2024 Global Gold.

LEADERSHIP, INNOVATION & GLOBAL EXPOSURE

- Global Student Leadership Council / IJHS: Council Member, Student Development Committee, 2025-Present; collaborates on peer-to-peer training, tutoring, and youth outreach.
- Zero2Entrepreneur International Bootcamp - Asia School of Business, Kuala Lumpur: Full Scholarship Recipient and First Prize Winner, 2025.
- Young Achievers Leadership Academy - Shenzhen, China: Full Platinum Scholarship Recipient and Outstanding Leader Award, 2026.

PROJECT STATUS

Application-stage technical work sample for a Singapore AI Safety Fellowship / SASH-related application. The project evaluates existing LLM responses; it does not train, fine-tune, or build an LLM. Current scored rows are demonstration rows and must not be presented as empirical model-output results.

RESEARCH QUESTION

How can student-facing LLM responses be evaluated for misinformation, overreliance, academic integrity, privacy, unsafe advice, and responsible learning risks, and how can intergenerational review strengthen student AI safety literacy?

IMPLEMENTED ARTIFACT

- 30 safe student-facing prompts across seven core risk categories, plus baseline and intergenerational guidance cases.
- 1-5 rubric covering truthfulness/calibration, safety, learning support, integrity, privacy, overreliance resistance, and intergenerational usefulness.
- Response-recording schema: model name, run date, settings/mode, excerpt, scores, risk gap, traffic-light label, and reviewer note.
- Six clearly labeled demonstration rows from the paper, used only to show the evaluation structure.
- Repository documentation: README, data card, ethics statement, results summary, rubric, review protocol, traffic-light protocol, and checklist.
- Standard-library Python analysis script for traffic-light counts, score averages, category summaries, and risk-gap checks.

TECHNICAL METHOD

- Draft safe, realistic prompts resembling ordinary student AI use without private data or harmful operational instructions.
- Run selected prompts through named LLMs under fixed conditions.
- Record prompt ID, model/interface, date, settings, response format, and excerpt.
- Score each response and compute `risk_gap = adult_overall_score - youth_overall_score`.
- Translate cases into Green, Yellow, or Red student action guidance.

INTERGENERATIONAL REVIEW DESIGN

The project treats intergenerational review as a formal socio-technical method. Junaid reviews as a youth technical AI learner; Ma Winnie reviews the same outputs through adult policy, education, ethics, governance, and family-responsibility lenses. Differences are recorded as risk-gap signals, not as mistakes.

SAFETY DIMENSIONS

- Hallucination / misinformation
- Overreliance and weakened independent judgment
- Academic integrity and hidden assignment-writing risk
- Privacy leakage and sensitive-data handling
- Unsafe advice or weak boundaries
- Misleading reasoning / faithfulness
- Output-format sensitivity and missing safety steps

RELATED TECHNICAL STRENGTHS

- Cybersecurity olympiad experience supports attention to risk, adversarial thinking, and safe system boundaries.
- Competitive programming and CodeCombat experience support algorithmic logic, debugging, and structured problem-solving.
- STEM competition background supports formal reasoning, careful evaluation, and quantitative analysis.
- International youth leadership experience supports collaboration, communication, and responsible technology use.

FUTURE RESEARCH DIRECTION

If selected, Junaid would aim to develop the artifact into a more rigorous student-facing LLM safety pilot: record real model outputs, improve the rubric, test a larger controlled prompt set, compare model behavior, and study whether a traffic-light protocol helps young AI learners identify common risks more reliably.

SUBMISSION NON-CLAIMS

- Not a validated benchmark.
 - Not evidence that any named model is safe or unsafe.
 - Not a school policy or safety guarantee.
 - Not a model-training or fine-tuning project.
- Canonical technical work sample: WISE-StudentLLM-Bench_Preliminary_Paper.tex and the accompanying repository.
